Internship

This summer I had the opportunity to intern at Navigaite and get first hand experience with AI and marketing. Navigaite is an AI consulting company that helps businesses better understand how to use different AI platforms, incorporate AI within their company, and train their own employees on how to use this technology. I was able to participate in a 10 week program where I worked around 6 hours a day. I was given access to 2 different AI platforms called Jasper and Writer. Writer is an enterprise AI platform that helps companies create and use AI safely at scale. It speeds up content and communications (blogs, ads, emails, sales collateral) while keeping everything on-brand and compliant by enforcing style guides, voice, and policy guardrails. For Jasper marketers get reusable templates, campaign workflows, and lightweight approvals that cut review cycles, plus collaboration tools so writers, designers, and managers stay in sync. Jasper also plugs into the tools you already use (docs, CMS, ad platforms) and offers basic performance insights, helping teams move from ideation to publishing more quickly without sacrificing brand consistency.

At my job at Navigaite, I built a full marketing skill set around generative AI while shipping real work. I started by onboarding to Writer and Jasper, setting goals, and choosing an athletic team as my campaign theme. Over the next few weeks I completed Jasper Academy and Writer Academy courses, practiced prompt engineering, and used both platforms to draft and refine campaign content. I built a content calendar, tested Jasper's Canvas workflows, and used Writer for rewriting, summarizing, and SEO tasks. Midway through, I presented my campaign

plan, began the DMI “AI in Digital Marketing” certification (which I finished), and continued a Coursera marketing analytics course where I completed the modules and a graded test. I also explored Jasper’s community resources, started a knowledge graph, and designed a no-code AI agent in Writer’s AI Studio to automate pieces of the campaign, then iterated on it for a capstone demo. In the final stretch I produced landing-page and email copy, integrated AI workflows for blog and social, polished the agent, and created two LinkedIn posts one reflecting on my journey and another showcasing the project. Overall, I gained hands-on experience using enterprise AI tools to speed up content, enforce brand consistency, and prototype practical assistants exactly the kind of work Navigaite does when it implements Writer across functions and manages AI change at scale.

During my time I learned how to make an AI agent on Jasper. AI agents are software workers that use LLMs plus your data and tools to complete multi-step tasks with minimal human help. The agent that I was able to create the main goal was to streamline and quickly turn large pieces of information into social media posts such as Instagram posts and stories. I had to go into Jasper and write out all of the instructions I wanted this agent to do for me. I made sure to apply a proper voice for our brand, guidelines on how to keep it short, simple and engaging and who the target audience is. This agent then would help me take long briefs, research or blog posts and then quickly turn them into an instagram post that helps promote our company and connects to the audiences. I also learned a lot more about marketing as I took extra online courses. I gained a deeper understanding of marketing analytics, and how to engage your target audience. Beyond that, I learned how to define clear personas and pain points, map the customer journey (awareness → consideration → conversion → retention), and pick the right channels for each stage. I got hands-on with A/B testing, UTM tracking, and reading basic metrics like CTR, CPA,

and conversion rate so I could tell what was actually working. I practiced building simple content calendars, writing creative briefs, and keeping a consistent brand voice across blogs, emails, and social posts. I learned the basics of SEO (keywords, intent, internal links), how to repurpose one long piece into multiple short assets, and how to set goals and hypotheses before launching a campaign. Finally, I saw how AI can speed up drafts but still needs guardrails, fact-checking, style rules, and compliance so the output stays on-brand and accurate. Finally, I learned how to build a mock campaign. I was able to build my own mock campaign for the Bay FC women's soccer team where I was able to put all of these AI tools and knowledge to work. I learned how to create a content calendar and how important it is to schedule every single post on every single platform. This helps build a strong and efficient team within one's company or business. I was able to plan potential events for each game day such as theme nights and heritage nights. I also got to use Jasper to help make me mock instagram posts promoting gamedays and other related events.

I did find some things that surprised me along the way when completing my internship. First off, I found that our job wasn't just about teaching and showing these companies how to use AI but also persuading them to do so. As we enter this new digital age with AI people often find themselves extremely overwhelmed, unsure, and even scared when working with AI. One of our main jobs when first working with a business/company is explaining that AI is not here to take jobs but rather help make these jobs much easier and being able to complete simple tasks much faster. We make it very clear that these platforms that we are introducing to specifically take away the parts of work that can feel time consuming and tedious and then allow the employees and company to put more of their focus and energy into the more creative and the bigger picture during work. We also have to explain to these clients that AI is going to make an impact whether

we want it to or not so it is extremely important for these clients to understand how to work with AI instead of against it. During this process made me realize that I myself do not see AI as a threat as much but more as a tool to help you but for the older generations this is a completely new and unheard of concept. I have grown up with all the technology at the tips of my fingers but for people who have been working for 20 or 30 plus years they constantly have to evolve and adapt to these new technology advancements. Our job is to make that transition a lot less daunting and teach them how to properly use these tools so they can succeed in this digital age. Another surprise I encountered along the way was how AI cannot work correctly without humans. When creating my mock campaign and agents I quickly realized that I had to constantly adjust and correct these AI tools. When creating my agent I had to tell it the proper tone of voice for our company, I had to give it specific instructions on how I want things to look, and I often found myself a lot of the time going back in and making a lot of changes and correcting the AI mistakes. AI cannot replace humans, it needs humans to direct and correct it. This made me realize that the panic of AI taking over our jobs is not as relevant as we think it is. I often saw these platforms make mistakes which I had to go back in and fix.

As I prepare to head into the working world and start looking for jobs I feel that this internship has very much prepared me and helped me acquire new skills. I was able to experience what it was like being a part of a real company. I was able to learn how to communicate with my coworkers on different platforms, sit on important and insightful meetings, and see how it feels just to work for an established company. Another big takeaway that I got was my experience with the usage of AI and completing a variety of online certifications. With these certifications it shows that I know how to properly use these different AI platforms and marketing knowledge. I am able to post them to my LinkedIn, put them on my

resume and even talk about them in interviews. I also had the opportunity to talk to the CEO of Fannie Mae. I did have to properly prepare for this meeting with her where I created a list of questions and figured out how I wanted to introduce myself to her. I was able to hear about her experience in the working world and how she got to where she is now. This gave me more confidence for upcoming interviews now that I know how to prepare beforehand and properly do research about the interviewer and company. I also feel that with my mock campaign will be something I am able to show off and talk about during interviews. Having something I worked on outside of school and allowing me to show off my strengths and ideas that I have to offer for jobs.

Finally, looking back at the EMPACT model I felt that my internship with Naviagite does directly relate to some of these components. Starting with matching, one of Navigaite's main goals is to make sure that they match their clients with the right AI platform. For example, if a company is a lot more focused on quickly writing and streamlining blog and social media posts then Writer would best fit them. If a client's main focus is for creating websites, calendars, etc then we direct them to Jasper. I learned the importance of making sure that we direct and match the client with the proper tools so they can best succeed. Another component that relates to my work was assortment. I learned that Navigaite put in a lot of effort with picking and buying the right AI platforms that make the most sense with helping businesses become more efficient. Instead of just buying as many AI platforms as we could we specifically researched and chose the ones that best align with our and our client values and goals. We then were able to learn how to use those and then sell them to our clients with our prior experience.

Overall, I felt that my internship has very much prepared me for a number of things. I feel much more confident working with a professional team and being a part of a company. I also

feel ready for future interviews for job opportunities. Thai experience has been very valuable to me and I will take these skills with me for the rest of my life.
